#### **DETAILED ACTION**

## Specification

- 1. The substitute specification filed March 14, 2005, has not been entered because it does not conform to 37 CFR 1.125(b) and (c) because: Applicant has not made a statement that the substitute specification includes no new matter. If Applicant resubmits the substitute specification and the marked-up copy of the substitute specification and includes a statement (in his REMARKS) that the substitute specification includes no new matter, the problem would be resolved.
- 2. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: In paragraph # 5, "the protrusion 102 is subject to friction with the Chromium (Cr) deposition on the bottom surface of the protrusion 102" is unclear. In paragraph # 5, "Wherein the Chromium (Cr) deposition on the bottom surface is extremely precise circuit protecting shroud layer so jointwith a jacket membrane 201a to stop the dust particle off the focus of photomask 201" is unclear. In addition, there are numerous ideomatic errors in the specification. If Applicant resubmits the substitute specification filed March 16, 2005 (but not entered) along

Page 3

with the marked up copy of the substitute specification and a statement that the substitute specification includes no new matter, the problem would be resolved.

### Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all 3. obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamauchi (U.S. Patent No. 5,353,934) in view of either Matsumura (U. S. Patent No. 5,823,736). Yamauchi discloses in figure 1 and column 3, lines 15 - 54, an apparatus 1 for holding a substrate of a photomask 5. A plurality of protrusions 6 (with caps 7) are formed on photomask holder 3. Column 3, line 26, discloses that the protrusion 6 is tapered (cambered). Thus, Yamauchi discloses the invention except for disclosing through holes in the holder, with the protrusions in the through holes. Matsumura discloses in figure 3 and column 3, lines 25-67, and column 4, lines 1-57, through holes 31, with pins 32 extending there through.. The pins 32 would be detachable. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide Yamauchi with through holes for the protrusions 6 for the purpose easier construction and more flexibility in using the apparatus.

Art Unit: 2851

## Allowable Subject Matter

5. Claims 1, 3, and 4 are allowed. Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The reasons for the indicated allowability of the claims are as follows:

The prior art does not disclose or suggest wherein each protrusion is comprised of a PEEK or VESPEL material; and wherein a photomask is disposed on the supporting ridges so that a surface contact area and friction between the supporting ridges and chromium deposition formed at a bottom surface of the photomask are substantially reduced so that generation of particulates due to friction between the protrusions and a chromium deposition formed at a bottom surface of the photomask is substantially reduced in combination with all the other elements recited in independent claim 1.

The prior art does not disclose or suggest wherein pedestal formed far away from each supporting ridge is detachably integrated into the through holes of the photomask holder in combination with all the other elements recited in the parent claim of dependent claim 6.

#### Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alan A. Mathews whose telephone number is (571) 272-2123. The examiner can normally be reached on Monday through Friday from 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Judy Nguyen can be reached on (571) 272-2258. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
